Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

Reset answer

```
#include<stdio.h>

void func(int n){
    int count=0;
    count++;
if(n==1)
    {

        count++;
    }else
    {
        count++;

         for(int i=1; i<=n;i++)
         {
            count++;

        for(int j=1;j<=n;j++)
        {
            count++;

            count++;
            count++;

            count++;
            break;

        }
    }
}
```

```
33  printf("%d",count);
34  }
35
36  int main()
37  {
38      int n;
39      scanf("%d",&n);
40      func(n);
41      return 0;
42  }
43
44
```
