Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time

complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

Reset answer

```
#include<stdio.h>
void function(int n){
    int c = 2;

    for(int i = n / 2; i < n; i++){
        c += 2;
        for(int j = 1; j < n; j = 2 * j){
            c += 2;
            for(int k = 1; k < n; k = k * 2){
                c += 2;
            }
        }
    }
    printf("%d\n", c);
}

int main(){
    int n;
    if(scanf("%d", &n) == 1){
        function(n);
    }
    return 0;
}
```

	Input	Expected	Got	
✔	4	30	30	✔
✔	10	212	212	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
