Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

Reset answer

```
#include<stdio.h>
void reverse(int n){
    int c = 1;
    int rev = 0, remainder;
    c++;

    while(n!=0){
        remainder = n % 10;
        c++;

        rev = rev * 10 + remainder;
        c++;

        n /=10; c++;
        c++;

    }
    c++;
    printf("%d\n", c);
}
int main(){
    int n;
    if (scanf("%d", &n) == 1){
        reverse(n);
    }
    return 0;
}
```

	Input	Expected	Got	
✔	12	11	11	✔
